SCSS

## RECENT PROJECTS

### MOONSWELL | HACKATHON

[Deployed Site](#)

*Moonswell is a React SPA (single-page application) made as part of a collaborative hackathon which allows users to seamlessly input a location and generate relevant live data for weather, tidal, and lunar experiences in the specified geographical area using API calls.*

- Data retrieval and output formatting from various public APIs;
- Features an interactive geolocation search bar;
- Dynamic news tiles;
- Tailwind CSS styling;
- Netlify functions for API key security;
- A custom web scraper api built in express;
- Git collaboration with feature branching style;
- Stack: React, JavaScript, Tailwind CSS, React Context API, React Router, React Fetch API and Axios

### FITNESSFINDER API

[Github Repo](#)

*FitnessFinder API is a web server API which intends to mitigate and ease the process of finding a new fitness center by allowing owners to log their fitness centre details in a database in order to return relevant information to a user at a specified endpoint.*

- All HTTP request methods;
- Both public and secure (via JWT and verification), complex, and dynamic endpoints;
- MVC architecture and synthesis via Marshmallow/Flask-SQLAlchemy ORM;
- 3NF database normalization of psycopg2 dbms;
- Stack: Python, Flask, SQLAlchemy ORM, Marshmallow, PostgreSQL, Insomnia (testing)

### VIPER | TERMINAL APP

[Github Repo](#)

*Viper is a language learning terminal application which allows users to learn a language based on a pre-populated CSV file.*

- Features three modes: translation (uses Googletrans pkg), learning, and quiz mode;
- Various points for user input and control;
- Autogeneration of a quiz metrics .txt file;
- Includes a threaded timer;
- Source file pathing and readability for CSVs;
- Bash scripting for single CLI command;
- Adequate error handling and input sanitization;
- Functionality for learning any language;
- Continuous main menu and "exit anytime" capability;
- Stack: Python, Googletrans, CSV
